STORAGE DEVELOPER CONFERENCE

# Long Term Preservation and Archive Storage

Shashidhar Joshi

# Framing the Discussion

# Framing the Discussion for Today

- Storage Growth, Data Lifecycles and Extended Value from Archive data is expanding Archive Services
- Technology and Economic challenges are limiting factors to unblock Archive growth
- Workloads point us to the possibility of creating a grounds up Storage Technology that is better suited to address the challenges
- We will introduce Silica and explain the benefits associated with this technology
- Opportunity for Industry to contribute towards Silica

# Archive Landscape and Problem Statement

### Today's cloud storage landscape

# Data Growth and Storage

While short-term macro economic aberrations will continue to happen, the long-term trend will continue

Source: Data Age 2025, sponsored by Seagate with data from IDC Global DataSphere, Nov 2018

### Only a fraction of the generated data is Stored

Source: Data Age 2025: IDC

. . . . . . . . . . . . . . .

# Data LifeCycle and Value Creation

Two main reasons to delete data

- 1. Does not provide anymore value
- 2. Provides value, but is not economical to keep storing

Market Dynamics

- 1. New applications can extract more value
- 2. Lower cost can enable storing data for longer duration

# 

### Value Creation

### Value of Storage is Area under the curve

- 1. New applications can extract more value from archived data
- 2. Cost of storage determines the duration of storage and value realization
- 3. Creating new services within Archive Segment

Old Lifecycle and ValueNew Lifecycle and Value

Time of Deletion

# Can we Store it all ? Simple Budget Problem

- Budgets (% of Revenue) Assuming Revenue Grows, Storage Budgets Grows
- Storage Costs Need to reduce to deploy more storage with the allotted budget
- Current technologies do not have line of sight towards enabling step function changes in cost
- Need to develop new storage technologies, built with grounds up approach for cost and longevity

# Workloads and Technology Requirements

10 | ©2021 Storage Developer Conference ©. Insert Company Name Here. All Rights Reserved.

Low

Cost

High

### 

### Archive Workloads

- Writes are multiple orders higher than Reads
- Lots of Data Stored
- Read very Infrequently

- Small Read Sizes Random Access and Low Latency
- Large Reads Sizes Better Thruput
- Dynamic Provisioning

# Storage Technology Requirement

Lowest TCO Cost of Storage

• Acquisition Cost, Power Consumption, Media Refresh

Resilient

Media Properties

Media characteristics that make data Immutable and Durable

### Flexible & Available Read/Write/Media Disaggregation

• Scale and deploy as needed

# Silica – A Potential Solution

14 | ©2021 Storage Developer Conference ©. Insert Company Name Here. All Rights Reserved.

### 

# Silica at a Glance

# Silica Data Flow

### Media

- Blank Media enters the Writer
- Once Written, Media is sent to Verification (Reads)
- Once Verified, Media is Stored in the Library
- Upon Request, Media can be read as many times as needed
- Library + Robotics manage the handling of Media

# **Unique Media Properties**

• In abundance and Inexpensive

- Write Data "into the Media" vs "onto the surface"
- Media is Resilient to environmental conditions, EMP Proof

• Data is immutable, No Bit Rot or Data Corruption

• Media Consumes No Power and is Recyclable

# Disaggregation of Read/Write/Media

- HDDs and TAPE lack of disaggregation leads to fewer opportunities for optimizations
- For Silica, each of the modules can scale independently of each other depending on requirements
  - Scale Writers to Ingest Data
  - Scale Readers to enable Customer SLAs
  - Scale Library and Robotics for Quick Access vs Long Term Preservation

# Challenges

- Physics Works !!!
- Need to Solve Engineering Problems
  - Developing new Grounds-up Hardware
  - New Data Pipeline for Encoding and Decoding
  - Dynamic Scaling of Independent sub-systems

# **Opportunities for Industry Collaboration**

- Hardware Design Writer, Reader
- Library Mechanics Evolve to account for all Media Types
- New Supplier Base Lasers, Cameras, Optics
- Safety Enclosures
- Media Cleaning
- Data Center Footprint Cloud, OnPrem

# THANK YOU !!!

### QUESTIONS
